Why Choose Us

- 📺 Attentive Nursing
- 📺 Gentle Caring Aides
- 📺 Purposeful Spiritual
- 📺 Meaningful Social Services
- 📺 Thoughtful Volunteerism
- 📺 Music Therapy

Mission

Carepro Home Health is a patient care/customer service-centric agency. We are committed to providing a network of high-quality health care clinicians to encourage wellness in the individual, the community and to inspire good health in which people can remain healthy, independent and happy. This is achieved by our clinicians and staff because of their dedication, skills, expertise & experience; and equally important is their sincerity and joy in providing outstanding patient care.

Vision

On a nationwide basis, we envision having the honor of the employees, doctors, patients and patient’s family members, and the community healthcare partners.

Treatment of Achilles tendinopathy (from page 13)

including biomechanical issues, shoe modifications and physical therapy. Patients with midportion tendinopathy can benefit from either eccentric/Alfredson protocol or heavy, slow resistance, while those with insertional tendinopathy can benefit more from a modified eccentric/Alfredson protocol. There is mixed evidence supporting the use of topical glycerin trinitrate in the midportion group and shock wave therapy in the insertional group. There is mixed evidence for prolotherapy and use of nonsteroidal anti-inflammatory drugs (NSAIDs) in both groups.

Interventions

Corticosteroid injections. These are sometimes used to treat retrocalcaneal bursitis.

Ultrasound-guided percutaneous needle tenotomy with platelet-rich plasma (PRP).

In this procedure, the physician

delivers the PRP to the most diseased portion of the tendon using an ultrasound-guided needle. **Ultrasound-guided percutaneous pressured hydrotenotomy** This procedure uses a high-pressure saline stream to selectively debride and aspirate diseased tissue while preserving healthy surrounding tissue.

Neovessel ablation. Mechanical tendon scraping, which doesn't involve touching the tendon, can be used to reduce the neovascularity sometimes associated with this condition and thought to contribute to pain.

"Identifying which of these interventions is most effective for patients with Achilles tendinopathy is still a challenge," says Dr. Luetmer. "However, as we learn more about outcomes, we hope to help patients choose a cost-effective option with optimal likelihood of long-term improvement in pain and function."

The federal Fair Housing Act allows people with disabilities to request reasonable accommodations that will provide an equal opportunity to use and enjoy a dwelling.

Reasonable accommodations may include:

- Waiving a “no pets” policy or “pet” fee/limitations to allow assistance animals
- Providing a reserved parking space
- Transferring to a different unit because of a disability-related need

* There must be an identifiable relationship between the requested accommodation and the individual's disability.

REPORT HOUSING DISCRIMINATION!
